

????????????????????????????????  
 ?????????????????????

The diagram illustrates a sequence of operations on a memory stack. At the top, there are several horizontal bars of varying lengths, each composed of small rectangular segments. The first bar is the longest. Below it, there's a shorter bar followed by a gap and then another long bar. Further down, there's a bar of medium length, followed by a gap, then a short bar, and finally a label '3'. Below this, there's a very long bar spanning most of the width, followed by a shorter bar. At the bottom left, there are two small gray squares and a thin horizontal rectangle. To their right, there's a taller gray square. On the far right, there's a label '\_3'.
