Desktop Applications

Desktop Applications

Bitwarden Desktop Application Screenshot

Bitwarden desktop applications are also available for Windows, Mac OS, and Linux. They are very similar to the Bitwarden Web Vault and sync frequently with the Bitwarden Server. The desktop applications are fully featured, responsive applications that can be used to work with your password database in a local desktop environment. The Bitwarden Desktop applications also allow you to work with your data offline as they do not require a constant connection to the Bitwarden server.
