Script

[illegible]

- The diagram illustrates the structure of a packet in the network layer. The packet is divided into several fields: Source Address (32 bits), Destination Address (32 bits), Protocol (8 bits), and Length (16 bits). The packet is encapsulated in a frame, which includes a Frame Control field (2 bytes), a Duration field (2 bytes), and a Frame Body (containing the packet). The frame is then transmitted over the wire. The diagram shows the flow from the network layer to the data link layer and finally to the physical layer.

-
-
- The diagram consists of four horizontal bars, each divided into small rectangular segments. The top bar is the longest, followed by the third bar, then the second bar, and the bottom bar is the shortest.
